

Feature: Dynamic Queue List of AHC

As a ward doctor,
I want the queue list to refresh automatically and support filtering by patient priority,
So that I can attend to high-priority patients first.

Background:

Given the doctor dashboard is open

@auto-refresh

Scenario: Queue list updates automatically when patient status changes

When a patient status changes in the system

Then the queue list should update automatically within 30 seconds

@emergency-filter

Scenario: View only critical patients using the Emergency filter

Given the doctor wants to view only critical patients

When the "Emergency" filter is applied

Then only patients with critical priority should be visible

And the queue list should contain no routine patients
